

Job vacancy project lead and R&D

Starting date: ASAP
Location: Yes!Delft, Molengraafsingel 12, Delft
Type: Full-time
Contact: Send an email to team@DeWarmte.nl or call Sander on +31-646885138

Description

As one of the first full-time employees of DeWarmte you will be responsible for scaling up a company that aims to accelerate the transition towards sustainable heating. You will work on further developing the HeatCycle while at the same time managing our projects where actual HeatCycles will be placed and monitored. You will learn software (Python), hardware (prototyping, assembly and manufacturing) and soft skills (leadership, communication and management) in a fast-paced start-up environment with a social team. Prior experience with project management and in the installation (heating) market is preferred but not required.

You are

- *Motivated & independent.* You are able to define the scope of work independently and to stay motivated when working alone. You are able to endure setbacks and go for the extra mile when working on a task which is your responsibility.
- *Socially strong.* DeWarmte consists of a small team working closely together in our common goal to accelerate the transition towards sustainable heating. Thus, communication is key.
- *Technically educated.* You have a MSc master's degree and are "hands-on" experienced.
- *Flexible.* You can handle a high variety of tasks and are able to handle a varying workload.
- *Responsible.* You own your mistakes and learn from them. You are comfortable in bearing the responsibilities listed below.
- *Fluent in both Dutch and English and in the possession of a Dutch driver's license.*
- *Passionate about the "warmtetransitie".*

You are responsible for

- Project management (e.g. technical planning, communication, installation etc.).
- Supply chain & stock management (never run out of critical components).
- Leading multiple R&D projects, realising the projects together with R&D students.
- Continuously collecting installation feedback and improving the HeatCycle accordingly.

At the end of 2021 you

- Managed 2 projects from start to end.
- Developed & tested HeatCycle improvements resulting in a market-ready product.
- Developed & tested a HeatCycle "add-on" resulting in higher yield.
- Developed scalable HeatCycle components, ready for the production of 1000+ units.

DeWarmte offers

- Responsibility for the technical development of the HeatCycle.
- A young team and an organizational structure where you will make real impact from day 1.
- Responsibility for building the company, bringing it from a start-up to a scale up.
- WO start salary, Lunch & drinks at the office and a fulltime contract.
- High variety of tasks in a high-paced and fast-growing environment.
- A steep learning curve on R&D, installation, supply chain and leadership.
